

QGIS Application - Bug report #10021

Pointer Offset

2014-04-08 05:44 PM - Thomas McAdam

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:	Digitising	
Affected QGIS version:	master	Regression?: No
Operating System:	Windows	Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: end of life
Crashes QGIS or corrupts data:	No	Copied to github as #: 18507
Description		
<p>When digitising (creating new features) there is a small offset between the pointer (black cross with white circle) and the colored (thicker) cross that follows it around. This occurs even when it is stationary. I can't capture this problem with a screen grab.</p>		

History

I'm having the same issue. Here is a photo of the screen showing the offset. It changes and occasionally corrects its self if you click on and off the map window or change layers, etc.
