

QGIS Application - Bug report #10084

Legend does not display correct symbol in the composer when the size of the marker is changed

2014-04-17 02:21 AM - Frédéric Parrenin

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:		
Affected QGIS version:	2.2.0	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: duplicate
Crashes QGIS or corrupts data:	No	Copied to github as #: 18552
Description		
<p>See attached screenshot to understand the problem.</p> <p>In the legend, the Vittuari et al. (2004) dataset should be displayed with an arrow but it is displayed with a dot.</p> <p>This happens because I changed the size of the marker to '0.2' instead of '1'.</p>

How are you setting the size of the arrows in your layer? Is it via data defined symbology?

#2 - 2014-04-18 02:41 AM - Frédéric Parrenin

To change the symbol size, I go to the layer properties > Style > size

#3 - 2014-04-18 03:37 AM - Nyal Dawson

I'm still confused - in your image the arrows have varying styles. How are you controlling this varying size of arrows in your project? If it's via data defined symbology or via the "advanced"->"size scale field" then this is a known issue with legends...

- File Sans_nom_1.png added

I control the varying size and orientation of the arrows with the "advanced" button.

But if I keep unchanged the size, there is no problem with the legend.

See attached screenshot.
