

QGIS Application - Bug report #10147

Unable to open File gdb with Add Vector Layer tool

2014-05-01 01:03 AM - James Duffy

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:	Vectors	
Affected QGIS version:	2.2.0	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: worksforme
Crashes QGIS or corrupts data:	No	Copied to github as #: 18605
Description		
In QGIS 2.2.0 I am unable to select 'File GDB' from the dropdown menu when selecting 'Type' under the 'Source' submenu. This is however not the case in QGIS 2.3.0.

Which packages are you using? Does your GDAL build support filegdb?

Not sure which packages you're referring to. I installed QGIS with OSGEO4W. It could be that I only updated QGIS and not the GDAL part. How can I check this?

did you install the gdal-filegdb package?

- File filegdb.png added

You should see something like the attached image

#7 - 2014-05-06 01:10 AM - James Duffy

When running the installer and looking at the menu showed in your attached image, gdal-filegdb is 1.11.0-1. However, I have QGIS 2.2 and 2.3 installed, and opening filegdb works in 2.3...

#8 - 2014-06-13 11:02 AM - Antonio Locandro

Ok I can confirm this works in Master but not in QGIS 2.2, haven't noticed before since I usually start up master.

The filegdb and openfilegdb are not present in QGIS 2.2 probably since 2.2 is compiled against GDAL/OGR 1.10.1 while master is against Compiled against GDAL/OGR 1.11.0

Any reason why 2.2 can't be compiled against 1.11.0 so filegdb can be accessed
