QGIS Application - Feature request #10157
Able to distinguish Layers with a Join or that show only a Subset in the Layer View

Easy fix?:	No	**Copied to github as #:**	18614

Description

Ok basically this

If a layer has a join or a subset query have some way to show that in the Layer Tree View, maybe Highlighting with a different Color or displaying an icon next to the shape icon one?

This would be useful when other people open projects so they know a layer has a query applied or join, many times if a layer has a subset query applied users think information is missing
