

QGIS Application - Bug report #10188

Postgresql connection with i18n characters in either username or password fails.

2014-05-06 06:41 AM - Csaba Sandor

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:	Data Provider/PostGIS	
Affected QGIS version:	2.2.0	Regression?: No
Operating System:	Windows	Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: end of life
Crashes QGIS or corrupts data:	No	Copied to github as #: 18641
Description		
<p>When I try to connect to Postgresql server with my user and pass containing i18n chars I get "password authentication failed" and the username wrongly encoded in the error message. Special chars replaced by a '?'. Schemas, tables with i18n chars are properly displayed in QGIS. I can connect successfully with same credentials from: -command line on Ubuntu Server -pgAdmin III from my Windows box QGIS 2.2 on Windows 8.1 from OSGEO4W Postgresql 9.1 on Ubuntu Server 12.04 Side note: I think I have to allow special characters in username as I authenticate against AD through LDAP based on CN not UID.</p>
