QGIS Application - Bug report #10267
Data in attribute table changes after "joins"

2014-05-14 12:04 PM - Jeanine Johnson

Status:	Closed			
Priority:	Normal			
Assignee:				
Category:	Attribute table			
Affected QGIS version:	2.2.0	**Regression?:**	No	
Operating System:		**Easy fix?:**	No	
Pull Request or Patch supplied:		**Resolution:**	invalid	
Crashes QGIS or corrupts data:		**Copied to github as #:**	18699	

Description

The issue happens when I attempt to join a shapefile and data table. When I add the layer, the attribute table seems normal. When I press "joins" and go back into the attribute table it has changed. I am using Mac OS 10.9.2, saving the table as a CSV file in Excel. The Shapefiles are downloaded from Tiger. I have tried many things-uninstalling QGIS, then re-installing, using many different formats of data files, etc. Is there something I can do?

What do you mean? When you join data it will update the attribute table with the new information.
