QGIS Application - Bug report #10274
QgsFieldExpressionWidget should show expressions in italics

2014-05-15 01:17 AM - Nyall Dawson

Status:	Closed			
Priority:	Normal			
Assignee:	Denis Rouzaud			
Category:	Edit widget			
Affected QGIS version:	master	**Regression?:**	No	
Operating System:		**Easy fix?:**	No	
Pull Request or Patch supplied:		**Resolution:**		
Crashes QGIS or corrupts data:		**Copied to github as #:**	18706	

Description

It would be a nice touch if QgsFieldExpressionWidget showed the expression row in a different font style (eg italic), or a different color, so that it's differentiated from the layer's columns. Otherwise it's a little confusing when the currently selected column appears twice in the list - one for the column, and once at the end for the expression value.

History

It does, but it's apparently overwritten by the OS.

Nyall I have fixed #10402 does this ticket still apply now? Column names will not be repeated when selected.

#3 - 2014-06-02 10:43 PM - Denis Rouzaud

On ubuntu, it's in italic in the data defined properties dialog, but not in the other places (with today's master).
Not sure why.
It might be the option dialog style that overwrites this?
