

QGIS Application - Feature request #10285

Nested forms with database relations: ability to decide whether embedded form is displayed in table or form mode

2014-05-16 03:18 AM - Andreas Neumann

Status:	Open	Resolution: Copied to github as #: 18714
Priority:	Normal	
Assignee:		
Category:	Unknown	
Pull Request or Patch supplied:		
Easy fix?:	No	
Description		
<p>For embedded forms/tables with database relations the relations widget should allow some configurable options:</p> <ul style="list-style-type: none">- display embedded widget in table or form mode- Configurable "title" of the embedded widget: currently, the relation name is displayed. It should be allowed to overwrite this with a configurable title. The relation name is not always suitable and understandable by end users. <p>When displaying the embedded widget in form mode, the first record should be automatically selected - not requiring the user to click and select the first record.</p>

I have also a enhancement for the embedded form:

- Activate copy to clipboard when selecting rows (or all rows) > now the users need to open child attribute table, filter rows, select them and then copy to clipboard

@Andreas: about your second point, you can use "technical name" as ID and "understandable name" as Name when creating the relation.
