

QGIS Application - Feature request #10287

Database relations: ability to define special cases for 1:1 and object-relational relations

2014-05-16 06:15 AM - Andreas Neumann

Status:	Open	Resolution: Copied to github as #: 18715
Priority:	Normal	
Assignee:		
Category:	Forms	
Pull Request or Patch supplied:	No	
Easy fix?:	No	
Description		
<p>In 1:1 mode the UI should behave as follows:</p> <ul style="list-style-type: none">- only the form will be displayed (no table, no feature list)- the plus-button will be removed, link would replace existing links <p>In object-relational mode when the same parent table is referenced from multiple child tables of different types (e.g. structure_part referenced by child table cover, access_aid, dryweather_flume, etc.). The type of the parent record is specialized from exactly one matching child record (e.g a structure_part can be of type cover, access_aid, etc.). UI wise we would split the layout. E.g. on top one would list the parent records and at the bottom the specialized child records.</p>
