

QGIS Application - Feature request #10292

Mode Defined Interval

2014-05-16 08:17 AM - Antonio Locandro

Status:	Open	Resolution: Copied to github as #: 18720
Priority:	Normal	
Assignee:		
Category:	Symbology	
Pull Request or Patch supplied:		
Easy fix?:	No	
Description		
Add a mode in which the interval size would be set manually		
Use case: You want the interval size to be exactly 10		
You can try to do it with Pretty Breaks but it is time consuming and it works first looking if it can classify for example by 2000,1000,500,200 etc		
Maybe Pretty breaks should be replaced by "Defined Interval" as defining the interval would achieve what Pretty Breaks does, but extends it		
When selecting defined interval Classes should be grayed out and Interval Size shown

- Easy fix? set to No

#2 - 2018-03-19 06:54 PM - Antonio Locandro

Not available in latest version and actually I can't seem to find pretty break anymore
