Crashes QGIS or corrupts data:		Copied to github as #: 11090
Description		
When I use the '!=' operator in "Add [[PostGIS]] layer" dialog, the layer name in the layer list is incomplete/broken. For example - it should be: <pre>pokrycie" (the_geom) sql="rodzaj" != 'Zarosla'</pre> while it is: <pre>pokrycie" (the_geom) sql="rodzaj</pre>
