Easy fix?:	No	Copied to github as #: 18741
Description With the query builder you can create complex filtering of what features of a layer that are to be shown in the canvas. But since you can not edit a filtered layer it would be nice to be able to toggle the filtering off for editing and then just toggle it on again afterwards. As it is now, you have to delete the filter expression totally and reenter it again. I use to paste it into a text file but it is not that handy.
