Pull Request or Patch supplied:		Resolution:
Easy fix?:	No	Copied to github as #: 18823
Description		
<p>This is the just a wild idea but putting it here so I don't forget, plus I think it would be pretty cool.</p> <p>The idea is to create a new tabbed version of the style manager and allow the user to drag a symbol on to a feature and it would style that feature/s with that symbol.</p> <p>General code model:</p> <ul style="list-style-type: none">- Drop symbol- Grab active layer- Find feature under drop point- Reverse lookup of feature symbol in renderer- Replace symbol with dropped one <p>Issues:</p> <ol style="list-style-type: none">1. How to handle dropping over stacked features?2. Rule based renderer with multimatched rules? <p>The above issue could be solved with a pop out list of options.</p>
