QGIS Application - Feature request #10407 Drop symbol onto map feature to style

2014-05-31 05:16 AM - Nathan Woodrow

Status:	Open	
Priority:	Normal	
Assignee:	Nathan Woodrow	
Category:	Symbology	
Pull Request or Patch supplied:		Resolution:
Easy fix?:	No	Copied to github as #: 18823
Description		
This is the just a wild idea but putting it here so I don't forget, plus I think it would be pretty cool.		
The idea is to create a new tabbed version of the style manager and allow the user to drag a symbol on to a feature and it would style that		
feature/s with that symbol.		
General code model:		
- Drop symbol		
- Grab active layer		
- Find feature under drop point		
- Reverse lookup of feature symbol in renderer		
- Replace symbol with dropped one		
Issues:		
1. How to handle dropping over stacked features?		
2. Rule based renderer with multimatched rules?		
The above issue co	uld be solved with a non out list o	fontions
The above issue could be solved with a pop out list of options.
