<b>Crashes QGIS or corrupts data:</b>	No	<b>Copied to github as #:</b> 18824
<b>Description</b> <p>Seems labeling is broken now. I can select field or enter expression into label field, but after pressing Apply button this field cleared and no label shown on canvas. It is very easy to reproduce:</p> <ul style="list-style-type: none"><li>- open vector layer</li><li>- go to layer properties, Labels tab</li><li>- turn labels on, select field</li><li>- press Apply button</li><li>- field will be cleared and there are no labels on canvas after closing dialog.</li></ul> <p>Maybe related to switch to QgsFieldExpressionWidget</p>
