

QGIS Application - Bug report #10415

Identify Results panel resizes when deleting the selected feature

2014-06-02 03:39 AM - Harrissou Santanna

Status:	Closed	
Priority:	High	
Assignee:		
Category:		
Affected QGIS version:	master	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:	No	Resolution:
Crashes QGIS or corrupts data:	No	Copied to github as #: 18830
Description		
<p>these are the steps:</p> <p>Toggle editing a layer</p> <p>Identify a feature with the Identify tool</p> <p>Then select and delete it, without having cleared identify result.</p> <p>The "Identify Results" panel automatically resizes its width as there is no more data to show.</p> <p>And this change narrows (too much?) the width of others panels like Map Legend.</p> <p>I think the "Identify Results" panel width should be the one decided by the user.</p>
