

QGIS Application - Feature request #10420

Use field values for numerical / string entries when the algorithm is executed iteratively

2014-06-02 06:44 AM - Michael Douchin

Status:	Open	Resolution: Copied to github as #: 18835
Priority:	Normal	
Assignee:	Victor Olaya	
Category:	Processing/Core	
Pull Request or Patch supplied:	No	
Easy fix?:	No	
Description		
Processing allows to use an expression to calculate the value of a "number" entry. See http://docs.qgis.org/2.2/en/docs/user_manual/processing/toolbox.html#the-algorithm-dialog When using a script or algorithm in "iterating" mode (green arrow next to one vector layer entry), it could be handy to be able to use one or more field names of this layer in the expression, so that the entry numbers or string can be calculated with an expression like "somefield" * 2 + "otherfield"
