<b>Crashes QGIS or corrupts data:</b>	No	<b>Copied to github as #:</b> 18870
<b>Description</b>		
<p>With QGIS master there is now an image placement option in the print composer. This is great and I think the top-left anchor makes sense.</p> <p>However, there is a migration issue for old content migrated from 2.4. where the image had a middle anchor by default. The result is that images may appear shifted after opening them in current master. To see the problem have a look at the attached screenshot and the Uster logo in the top-right of the layout. In master (right) the image appears vertically closer to the rectangle as in version 2.4.</p> <p>Could we keep top-left as the default for new elements, but when opening old project files automatically set middle as an anchor?</p>		

Associated revisions

Revision 6b973e1c - 2014-06-07 05:34 AM - Nyall Dawson

[composer] When opening pre 2.3 projects keep picture item placement at middle (fix #10458)
