Crashes QGIS or corrupts data:	No	**Copied to github as #:**	18881	

Description

The symbology previews for items in the layers list fail to update when changed after a layer is re-ordered via drag and drop.

Steps to reproduce:

1. Create a new project
2. Add two vector layers (can be same dataset, or two empty memory layers, doesn't matter)
3. Drag the top layer below the second layer via mouse drag and drop
4. Open the symbology property of the dragged layer and tweak the symbology (simply click on one of the pre-saved symbol)
5. Apply the change by clicking on 'OK'
6. Notice the layer symbology preview failed to update
