

QGIS Application - Bug report #10510

Geometryless table sets project CRS to epsg:4326

2014-06-09 07:25 AM - zicke -

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:	Unknown	
Affected QGIS version:	master	Regression?: No
Operating System:	Ubuntu	Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: end of life
Crashes QGIS or corrupts data:	No	Copied to github as #: 18920
Description		
<p>When you add a geometryless table from postgis as the first layer in a new project, the project crs is set to epsg:4326. If you then add a layer with geometries in another crs than epsg:4326 QGIS enables on-the-fly reprojection and wants to reproject the new layer.</p> <p>If you add a layer with geometry first and then add a geometryless table QGIS still enables on-the-fly reprojection.</p> <p>My settings are:</p> <ul style="list-style-type: none">- Default CRS for new projects: "Don't enable 'on the fly' reprojection'- Always start new projects with this CRS: EPSG:21781- CRS for new layers "Use project CRS" <p>Project settings:</p> <ul style="list-style-type: none">- Enable 'on the fly' CRS transformation is unchecked.

It seems to be broken again. But this time without enabling on-the-fly reprojection. Scale is wrong too.

Fixed in changeset commit:"0a2948af30d4004d8dd732b405da1cfcdaa160b6".

#9 - 2016-04-08 02:25 AM - R. R.

- *Status changed from Closed to Reopened*

When adding a geometryless PostGIS table to the layers panel the CRS of the layer is WGS 84 (EPSG 4326). In the case of adding a table containing geometries to an existing geometryless table, the CRS of the project is set to 'EPSG 4326 (OTF)'. My default CRS is MGI / Austria GK East (EPSG 31256).

(Windows 7, QGIS 2.14.1)

I suppose this is a regression from previous QGIS versions.
