

QGIS Application - Feature request #1061

Multiple symbols over a single point

2008-05-06 04:07 AM - pls -

Status:	Closed	
Priority:	Low	
Assignee:	nobody -	
Category:	Symbology	
Pull Request or Patch supplied:		Resolution: fixed
Easy fix?:	No	Copied to github as #: 11121
Description		
<p>It could be useful to graphically represent different kind of informations related to a single point of interest; these informations are stored in the layer's database, for example in the form of a filename of the picture chosen to represent the value of that particular attribute.</p> <p>Example: in the attached picture can be seen two points of interest with different informations displayed as symbols; the filename of the graphic symbol is used to show the information, and "null.svg" in an empty symbol to use when that particular characteristic is not present.</p>

- Resolution set to fixed
- Status changed from Open to Closed

With new symbology it's possible to draw multiple symbols for a point. Moreover there's a point displacement renderer which is able to align the symbols automatically.
