QGIS Application - Bug report #10623
OpenLayers plugin and polygon layers

2014-06-18 06:42 AM - Rui Pina

Status:	Closed			
Priority:	Normal			
Assignee:				
Category:				
Affected QGIS version:	2.2.0		**Regression?:**	No
Operating System:			**Easy fix?:**	No
Pull Request or Patch supplied:			**Resolution:**	duplicate
Crashes QGIS or corrupts data:			**Copied to github as #:**	19026

Description

I am using QGIS QGIS vs 2.3.0-Master (code revision: 95687a2) and have problems with OpenLayers plugin and polygon layers. Seems to me there are problems with the canvas interface, but here is a short description of the problems:

OpenLayers: simple does not add the WMS layer and gives an error, or when it can add nothing appears.

Polygon layers: after deleting some features, some others are not shown. It does not delete other features, but they do not show. When I restart QGIS they appear again.

- Resolution set to duplicate

- Status changed from Open to Closed

Hi Rui, thanks for noting, but the plugin has it's own issue tracker

https://issues.qgis.org/projects/openlayers/issues and has been reported before.

You can for example follow this issue to see status:

#9649

Hi Richard,

Thanks for the update.

In any case, please take a look for the problem with polygon layers in QGIS and consider reopening this issue.

I can send you further information.

Olá Rui,

please attach a sample of data causing the issue, but file a new ticket about this, or look for already existing ones. Thanks.

Olá Rui,

please attach a sample of data causing the issue, but file a new ticket about this, or look for already existing ones. Thanks.
