it seems to work ok here on Linux/KDE.

- Status changed from Open to Closed

Ah - I see in the QT-section of the protocol a message:

QAction::eventFilter: Ambiguous shortcut overload: F5

I found out in the "Settings" --> "Configure Shortcuts" that the "plugin reloader" plugin also assigns the "F5" key to reload the selected plugin.

So maybe we need to open a bug on the "plugin reloader" plugin then.

I'll close this bug.
