

QGIS Application - Feature request #1094

map and feature-table in view combined / feature-table docked to map-window

2008-05-19 02:10 AM - paull -

Status:	Closed	
Priority:	Low	
Assignee:	Tim Sutton	
Category:	GUI	
Pull Request or Patch supplied:		Resolution: fixed
Easy fix?:	No	Copied to github as #: 11154
Description		
<p>When editing maps, I often wish for a view where the map is present on the upper 2/3s of the screen, and below there is the features-table of the current layer I'm editing. In the features table, new objects would appear on top, waiting for the entry of additional data (instead of the standard input-popup window).</p> <p>One way to accomplish this would be to allow the user to dock the attributes-table to the window.</p>

I'm changing this priority to minor since 'major' should be used for broken features. The current implementation is not broken, it just doesnt work in a way that you personally prefer :-)

That said I would like to see it dockable too - I'll see if its feasible to do this in the limited time we have before the QGIS 1.0 release.
