

# QGIS Application - Bug report #10945

## python API QgsComposerLegend regression 2.2 -> 2.4

2014-07-24 06:55 AM - Pierre PM

<b>Status:</b>	Closed	
<b>Priority:</b>	Severe/Regression	
<b>Assignee:</b>		
<b>Category:</b>	Python plugins	
<b>Affected QGIS version:</b>	2.4.0	<b>Regression?:</b> No
<b>Operating System:</b>		<b>Easy fix?:</b> No
<b>Pull Request or Patch Supplied:</b>		<b>Resolution:</b> invalid
<b>Crashes QGIS or corrupts data:</b>		<b>Copied to github as #:</b> 19298
<b>Description</b>		
The following code works in QGIS 2.2 :  mapRenderer = self iface.mapCanvas().mapRenderer() c = QgsComposition(mapRenderer) legend = QgsComposerLegend(c) legend.setTitle(u"TITLE") legend.model().setLayerSet(mapRenderer.layerSet()) legend.setItemPosition(20, 195, 10, 10) c.addItem(legend)		
In QGIS 2.4, I can see on the rendered map the classification names but not the rectangles of styles, it's just blank.		
Thanks, Pierre

- Status changed from Open to Feedback

Works OK for me... can you test with:

```
mapSettings = iface.mapCanvas().mapSettings()
c = QgsComposition(mapSettings)
```

instead?

Otherwise, are you able to post a complete code sample which demonstrates this issue. For reference, here's the code I used to test with:

```
from PyQt4.QtGui import *
from PyQt4.QtCore import *

mapRenderer = iface.mapCanvas().mapRenderer()
c = QgsComposition(mapRenderer)
```

```
legend=QgsComposerLegend(c)
legend.setTitle(u"TITLE")
legend.setModel(mapRenderer.layerSet())
legend.setItemPosition( 0, 10, 100, 100 )
c.addItem(legend)

printer = QPrinter()
printer.setOutputFormat(QPrinter.PdfFormat)
printer.setOutputFileName("d:\\out.pdf")
printer.setPaperSize(QSizeF(c.paperWidth(), c.paperHeight()), QPrinter.Millimeter)
printer.setFullPage(True)
printer.setColorMode(QPrinter.Color)
printer.setResolution(c.printResolution())
pdfPainter = QPainter(printer)
paperRectMM = printer.pageRect(QPrinter.Millimeter)
paperRectPixel = printer.pageRect(QPrinter.DevicePixel)

c.render(pdfPainter, paperRectPixel, paperRectMM)
pdfPainter.end()
```

### #3 - 2014-07-29 01:05 AM - Pierre PM

OK, I guess that in QGIS 2.2, the 2 last arguments of legend.setItemPosition() didn't matter, but in 2.4 if they are too small you won't see the colored rectangles but you will see the text of the legend (using your code and just replacing 0, 10, 100, 100 with 0, 10, 10, 10).

It's OK, I just need to put some large numbers for these 2 last arguments; this behavior is strange though.
