QGIS Application - Bug report #10998
KML name in layer tree is different than the KML added to map canvas

2014-08-02 09:40 AM - Antonio Locandro

Status:	Closed			
Priority:	Low			
Assignee:				
Category:	Vectors			
Affected QGIS version:	2.4.0		**Regression?:**	No
Operating System:			**Easy fix?:**	No
Pull Request or Patch supplied:	No		**Resolution:**	worksforme
Crashes QGIS or corrupts data:	No		**Copied to github as #:**	19340

Description

When opening a KML e.g. real_estate.kml once it is added to the layer tree it gets a generic name ~GE2E41.kmz, this is very annoying since it should capture the name of the selected KML and should read real_estate instead

This complicates matters once you add several KML layers.

History

#1 - 2014-08-05 03:48 AM - Giovanni Manghi

- Status changed from Open to Feedback

- Category set to Vectors

I cannot confirm on bot qgis 2.4 and master, Linux and Windows. If you have a problematic file, please attach it.

#2 - 2014-08-05 09:13 AM - Antonio Locandro

- File barceloneta_outlets.kml added

Attached the file, it is named barceloneta_outlets.kml it has a single point, when opened in QGIS it is opened as ~GE2E41.kmz

#3 - 2014-10-08 09:50 AM - Giovanni Manghi

- Resolution set to worksforme

- Status changed from Feedback to Closed

works fine on qgis master on both linux and windows, please reopen if necessary.
