

QGIS Application - Feature request #11024

SLD "stroke-dasharray" should be always interpreted as a custom dash pattern.

2014-08-08 12:50 AM - Hannes Keski-Kiikoinen

Status:	Open	Resolution: Copied to github as #: 19363
Priority:	Normal	
Assignee:		
Category:	Symbology	
Pull Request or Patch supplied:	Not supplied	
Easy fix?:	No	
Description		
<p>When setting a style from an SLD file, a Stroke parameter</p> <pre><se:SvgParameter name="stroke-dasharray">1 2</se:SvgParameter></pre> <p>is interpreted by QGIS as a "dot line", resulting in unexpected and unwanted rendering. A more expected behaviour would be to interpret a "stroke-dasharray" always as a custom dash pattern.</p> <p>Reproduction:</p> <p>Create an SLD file with a stroke style that defines the above "stroke-dasharray" parameter. Load the style from that file. The line type will be set as "dot line".</p>
