Description

Hi,

I just add a pull request to allow the configuration of the GetFeatureInfo response from QGIS-Server.
https://github.com/qgis/QGIS/pull/1529

The pull add a sample file css that allow a logo and a different graphic structure for the tables.

With this enhancement all the items of the tables are customizable by the css.

Regards.

This is a sample of the results using the patch.

The sample show an example of logo, and show how the response is changeable using the configuration of a css.

I think we can close this ticket.

This kind of customization is now perfectly possible with Python server plugins.

#3 - 2015-04-10 07:51 AM - Giovanni Allegri

I don't agree with Alessandro, and I would reopen the ticket.
The suggested improvement is an effective and simple way to customize the output, without the overload and the complexities of working with python plugins to achieve the same goal. It's not the case of Andrea, but the same could be requested by a user without programming skills, and in many cases the user hasn't the option to introduce the use of python plugins inside their system (probably mantined by a sysadmin).
