Description

I need to create for the fire department in Ramnicu Sarat a map that will show all the streets, house numbers, number of lanes, oneway street, etc

I did all of this, but i cannot make the split in grids, and then generate a index of all the streets, showing that the street victoria is in grid A1,B2, street Calarasi is in D5, etc

And the same for the POI

This will be useful for them to be able to search fast for a address

They will have this map printed on a 2 by 2 meters canvas

I did the grids with mmqgis > Create Grid Layer > Rectangle (Polygon)

But now i don`t know how i can interrogate the database to search for Roads that are inside of each grid, and then make a list out of them
