**Description**

I have come upon this simple situation where I want to copy a point from one shape file layer to another shape file layer (see attached files).

Actions to reproduce:

- Copy the point from layer A.
- Enable editing on layer B.
- Paste the point to layer B.
- Disable/save editing on layer B.

I get the following error report:

Could not commit changes to layer B  
Errors: ERROR: 1 feature(s) not added.  
Provider errors:  
OGR error creating feature -7: Attempt to write non-point (MULTIPOINT) geometry to point shapefile.

The WKT of the point is:  
POINT(698816.3309880435699597 6166510.01372888591140509)

Layer A is the result of using the QGIS\\Vector\\Geometry Tools\\Multiparts to singleparts and I would expect the geometry type of the layer to be POINT.

ogrinfo reports the following:

INFO: Open of `A.shp`  
using driver `ESRI Shapefile` successful.  
1: A (Point)

What is happening here?
