

QGIS Application - Bug report #11115

ui form issues in qgis 2.4

2014-08-28 07:25 AM - terry Pavlis

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:	Forms	
Affected QGIS version:	2.4.0	Regression?: No
Operating System:	windows	Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: end of life
Crashes QGIS or corrupts data:	No	Copied to github as #: 19445
Description We developed a bunch of attribute entry forms for qgis using Qtcreator to generate ui files. We set them up in 2.0.1 and they continued to work fine in 2.2. In 2.4, however, our drop down combo boxes don't work any more. In the qgis field tab under properties, we used "line edit" in the past and that worked fine. Now that option doesn't exist in 2.4 and I've tried all the other reasonable possibilities and they don't work either. This must be a minor bug, but it certainly means we can't use 2.4 for now. Hope this can get fixed, I'm sure I'm not the only one who will discover this. I can provide a copy of the ui files if needed.

Hi,

The "Line Edit" has been merged into "Text Edit" which now supports QLineEdit, QTextEdit and QPlainTextEdit.

For QComboBox there are the two types "Value Map" and "Value Relation".

Is there a reason that you would like to use a "Text Edit" in favor of these instead?

Ok, I tried "Value Map" and "Value relation" and neither of them worked either. In the past the "line edit" was the default field, and it still worked with my comboboxes. It is possible I filled out the options wrong in value map and value relation, but it seemed pretty idiot proof. any hint?
