Crashes QGIS or corrupts data:	No	**Copied to github as #:**	19457

Description

A user reported a bug during edition of an attribute table under QGIS2.4.

To reproduce :

- create a vector layer with one "text" field (for example "foo") and add it in the current project
- open layer properties / Field tab, and check the "multiline" property of the "Text edit" for the field "foo"
- create 2 features with some content in the "foo" field
- save layer session and deactivate edition
- open attribute table, activate edition, toggle to the Form view
- click on one of the line in the left panel -> the line label changes into NULL
- click on another line in the left panel -> same behaviour.
- go back and select the first line -> the value in the "foo" field has bee completely erased
- toggle edition off, save -> no more values in the "foo" field.

History

#1 - 2014-09-02 08:38 AM - Matthias Kuhn

- Status changed from Open to Feedback

Not reproducible on recent master. Did you try with a nightly?

#2 - 2014-09-02 08:48 AM - Michael Douchin

- Target version deleted (Version 2.6)

- Priority changed from Severe/Regression to Low

- Status changed from Feedback to Closed

I just tested with last master, and I cannot reproduce the issue. Let's close it !

Sorry for the noise, I should have done it before opening this issue.
