

QGIS Application - Bug report #11242

Unit settings not available on Ellipse Marker

2014-09-20 01:16 PM - Thomas Schuettenberg

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:	Symbology	
Affected QGIS version:	2.4.0	Regression?: No
Operating System:	windows 7	Easy fix?: No
Pull Request or Patch supplied:	No	Resolution:
Crashes QGIS or corrupts data:	No	Copied to github as #: 19545
Description		
<p>Every marker type has several options to set map units / screen units (mm) for e.g. line width, symbol height, offsets etc.</p> <p>At the Ellipse Marker these settings are not available anymore i.e. the dropdown selection for map unit/milimeter is empty and can not be used. The global unit setting dropdown for markers works though.</p> <p>Layers which have mixed ellipse marker units (e.g. symbol width and hight in map units, outline width in milimeter - created with earlier versions of qgis (<2.4)) are still correctly rendered in 2.4 but they can not be generated in such a differentiated way. - Maybe this is (just) a GUI issue.</p> <p>found this on QGIS 2.4, Win 7 64bit (OSGeo4W) and Linux 14.04 64bit</p>

I'm fairly certain this is fixed in master. Are you able to test with a current snapshot and confirm?

#2 - 2014-09-21 12:13 PM - Thomas Schuettenberg

I managed to test with QGIS master exported again (Xubuntu 14.04, 64bit VM Box) and everything works fine.

You are right, it seems the issue has already been fixed. - Sorry for the noise.
