<b>Crashes QGIS or corrupts data:</b>	No	<b>Copied to github as #:</b> 19586
<b>Description</b>  I installed OSGEO4W with QGIS and OTB applications. (Tried 32 and 64 bits, same result) I check that OTB provider is activated (The BIN and LIB folders paramters are gone from the options in latest version. IS THIS NORMAL?). I try to start a module (tried multiple): ERROR could not generate output which means the module did not run (or similar text). I check OSGEO4W\\apps\\orfeotoolbox\\applications\\ : All the dlls are there		

#### History

- Resolution set to worksforme
- Status changed from Open to Closed

just tested on qgis 2.4/master on Windows/osgeo4w (with the otb-bin package installed) and it works as expected.

If the problem persist then please post the entire module log after the run.
