QGIS Application - Bug report #1130
Query builder attaches sql clause to wrong entry when PostGIS table has multiple geometry columns

Crashes QGIS or corrupts data:			**Copied to github as #:**	11190

Description

We have a [[PostGIS]] table with multiple geometry tables - one polygon and one point. The "Add [[PostGIS]] Table(s)" sorts the geometry columns by "Type". So "Point" appears above "Polygon".

When we double click on one of the tables and add selection criteria, the criteria is attached to the geometry column first in the sort sequence. So we have no way to add sql criteria to the "Polygon" column, since the criteria is always attached to "Point".
