| **Crashes QGIS or corrupts data:** | No | **Copied to github as #:** | 19598 |

**Description**

if I click 'table' or 'graph' in the identify panel (after a getfeatureinfo on a WMS layer in my case, that returned an html doc), then the panel controls disappear and I can't revert to different view of the records. See Table view in attached screenshot.

The only way I seem to be able to fix this is to do an identify operation on another layer and then come back to the first layer and the default identify content then appears again.
