Description

I found a problem with QGIS 2.4 and 2.5 yesterday build.

When you set the defeult the color for selections and you set the
alpha channel (i.e. to 25%), at next QGIS startup only the color
(without the alpha channel) is taken, until you modify the alpha
channel from the project options window.

To reproduce it:
1. open qgis with empty project
2. set the select color with transparency
3. close qgis
4. reopen qgis
5. load some layers
6. select one geometry: you'll see that the transparency value is
totally ignored
7. set the transparency from the options
8. now the selection is transparent

happens on both 2.4 and 2.5
