

QGIS Application - Feature request #11310

choose label field when classifying categorized

2014-10-02 08:05 AM - Raymond Nijssen

Status:	Closed	Resolution: Copied to github as #: 19606

Category:	Symbology	
Pull Request or Patch supplied:	No	
Easy fix?:	No	
Description		
<p>When I do a categorized classification, I must of course choose the column to create it. When I press 'classify' QGIS creates classes for all unique values in that field. Good!</p> <p>Now the labels are string values identical to the class values. Often good, but not always.</p> <p>I'm having a huge file containing two fields:</p> <ul style="list-style-type: none">- class codes (int)- class names (str) <p>I'd like to classify on the codes (it is quicker I think) and fill the labels by the names. I understand that possibly not all codes have the same label values in all records, but that is up to the user. QGIS could just map the first label it finds.</p>

Raymond found out that it is easier to just classify on the text field, there is just a minimal time difference in rendering
