<b>Description</b>		
What i really miss in Qgis is the autosave function, i don't save that often, and when qgis crashes , i have to redo all of my work

Hi,

There is a plugin named "AutoSaver" that might do such work. You can try it.

Also, I think, since QGIS 2.4, there is a copy of the project automatically created in the same folder, with .qgs~ file extension. I don't know if it is an option that should be activated somewhere (I don't remember I did it) but it works for me.

But whatever, you should often save your work :)
