QGIS Application - Bug report #11373
Problem with forms and left mouse button

2014-10-09 08:53 AM - Pedro Venâncio

Status:	Closed			
Priority:	Severe/Regression			
Assignee:				
Category:	Forms			
Affected QGIS version:	master	**Regression?:**	No	
Operating System:		**Easy fix?:**	No	
Pull Request or Patch supplied:		**Resolution:**		
Crashes QGIS or corrupts data:		**Copied to github as #:**	19664	

Description

To reproduce:

1) Fill the attributes of a layer, using forms, and pass through the fields with tab key. Try to select part of the text written in the fields... everything normal.

2) Do the same, but now, instead of passing to the next field by pressing tab, use the mouse button. Now try to select a portion of text written in the fields, from left to right... it seems that the selection gets stuck on the right ... After giving Ok, everything back to normal.

Please see the screencast: https://dl.dropboxusercontent.com/u/5772257/qgis/forms_mouse_click_button.avi

I'm testing on Windows with QGIS master 2.5.0-94.

Fix selection after focus-in by mouse in QgsFilterLineEdit

After focusing a QgsFilterLineEdit with the mouse, the end of the selection was
"attached" to the end of the content.
This was caused by overwriting Qt's mousePressEvent, that is responsible for
handling the selection without handing back the responsibility after the focus
in event was finished.

Fix #11373

History

#1 - 2014-10-11 03:10 AM - Pedro Venâncio

This happens not only in data forms. Also happens, for example, in the filter field of Coordinate Reference System Selector.

Tested also on Linux.

#2 - 2014-10-13 01:31 AM - Matthias Kuhn

- Status changed from Open to Closed

Fixed in changeset commit:"f3cf09f4ec4daeaa7c06c2f7f4cf7e90a48a81dd".
