QGIS Application - Bug report #11405
"merge selected features" broke on qgis master

Crashes QGIS or corrupts data:	No	**Copied to github as #:**	19685	

Description

it seems that the tool does not work anymore in master, testing with PostGIS layers.

With the same test db/layer it is ok on qgis 2.4

Master returns a

"an error occurred during the merge operation"

message.

It seems fine with shapefiles.

The tool seems to work fine with shapefiles.

On the other hand, it works well in postgis layer with features that have not been commited to the database yet. Primary key problems?
