

QGIS Application - Bug report #11457

Composer map: filter legend by map content doesn't work

2014-10-21 03:03 AM - Loïc BARTOLETTI

Status:	Closed	
Priority:	Severe/Regression	
Assignee:		
Category:	Map Composer/Printing	
Affected QGIS version:	master	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:		Resolution: duplicate
Crashes QGIS or corrupts data:		Copied to github as #: 19733
Description		
filter legend by map content works with map canvas but not with map composer (simple symbol or rule base for my test). All styles are into legend.		

History

#1 - 2014-10-23 11:46 AM - Nyal Dawson

- Affected QGIS version changed from 2.4.0 to master
- Priority changed from Normal to Severe/Regression

This should be a blocker - it's a new feature which isn't working correctly.

#2 - 2014-10-23 02:07 PM - Jürgen Fischer

- Status changed from Open to Feedback

The composer legend in the example file is not assigned to a map. Once it's assigned to the map, the legend filter works.

#3 - 2014-10-23 03:04 PM - Nyal Dawson

- File `classes_shown_on_map.png` added
- File `classes_not_shown_on_map.png` added

Hmm... There's still an issue here though. In some circumstances only the symbol is removed, not the actual legend text. I've attached screenshots which illustrate this.

#4 - 2014-10-23 10:35 PM - Martin Dobias

- Resolution set to duplicate
- Status changed from Feedback to Closed

Then this is duplicate of #11293 (second part of it). Currently when the filtering is turned on, only legend nodes are filtered out, the layer nodes stay in the tree, that's why you can see legend text with no symbol...
