

QGIS Application - Bug report #11509

.qgs contains relative path for datasource, GetCapabilities doesn't return layers

2014-10-27 12:01 PM - Steve Toutant

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:	Project Loading/Saving	
Affected QGIS version:	2.4.0	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: worksforme
Crashes QGIS or corrupts data:	No	Copied to github as #: 19779
Description		
<p>Using qgis desktop, qgis server 2.4 on fedora, I can launch GetCapabilities request but it contains no layers.</p> <p>.qgs contains relative path for data source (<datasource>./echantillonage.shp</datasource>)</p> <p>I manually edit .qgs so I can set an absolute path instead a relative path for datasource (<datasource>/opt/geodata/echantillonage.shp</datasource>) and GetCapabilities returns the layers.</p> <p>But as soon I edit my project in qgis desktop and save it, It overwrites my modification and re-create relative paths and the WMS still contains no layers</p>		

History

#1 - 2014-10-27 12:08 PM - Jürgen Fischer

- Resolution set to worksforme
- Status changed from Open to Closed
- Category changed from Browser to Project Loading/Saving

You can configure in the project properties whether you want to use absolute or relative (to the location of the project file) path.
