

QGIS Application - Bug report #11537

QGIS crashes on various operations

2014-11-03 11:01 PM - Piotr Synowiec

Status:	Closed	
Priority:	High	
Assignee:		
Category:	Project Loading/Saving	
Affected QGIS version:	2.6.0	Regression?: No
Operating System:	Mac OS X	Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: invalid
Crashes QGIS or corrupts data:	Yes	Copied to github as #: 19807
Description QGIS crashes on various operations. At the beginning it was after running python scripts through Script Runner plugin (ver 2.0.1). I tried also running previous version (2.4) project file by opening it and saving as new version (2.6). QGIS crashed when I delete a layer and tried to save project file after. I can reproduce these crashes in case any log files are needed.

History

#1 - 2014-11-04 12:20 AM - Giovanni Manghi

- Status changed from Open to Feedback
- Priority changed from Normal to High
- Crashes QGIS or corrupts data changed from No to Yes

yes please, add details on how to replicate, log files, terminal messages, whatever it can help track down the issue.

#2 - 2014-11-04 04:07 AM - Piotr Synowiec

- File QGIS_2014-11-04-141505_MBP15P.crash added

Crash log after the operation:

1. open project from version 2.4
2. save project to the new version
3. delete one layer
4. click on save icon to save project

#3 - 2014-11-04 04:10 AM - Giovanni Manghi

- Category changed from Build/Install to Project Loading/Saving

#4 - 2014-11-04 04:11 AM - Giovanni Manghi

- Target version changed from Version 2.6 to Version 2.8

#5 - 2014-11-04 05:28 AM - Giovanni Manghi

- Status changed from Feedback to Open

cannot replicate here on Windows and Linux, can you attach a sample project (and data) that would allow to replicate the issue?

#7 - 2014-11-04 07:22 AM - Giovanni Manghi

let's try ruling out 3rd party python plugins: disable/remove them, restart qgis and try again.

#8 - 2014-11-04 03:34 PM - Piotr Synowiec

1. Uninstalled all plugins from QGIS using Plugin->Manage & Install Plugins... that were in /Users/piotr/.qgis2/ folder.
2. Switched off the other plugins.
3. QGIS seems to work, works normally and do not crash on things that did before
4. Installed ScriptRunner and run scripts - script works and no crash

Question : shall I update all other plugins that are located in /Applications/QGIS-2.6.app ?

#9 - 2014-11-05 01:07 AM - Giovanni Manghi

- Status changed from Feedback to Closed
- Resolution set to invalid

so let's assume it was a faulty plugin the cause. Please reopen if evidence shows that it was really a qgis issue.

| Question : shall I update all other plugins that are located in /Applications/QGIS-2.6.app ?

I don't know Mac, just Linux and Windows, so I'm not sure what there is in /Applications/QGIS-2.6.app

anyway 3rd party plugins are always placed in .qgis2/

#10 - 2014-11-05 01:10 AM - Piotr Synowiec

worked whole day and no crash
