

QGIS Application - Bug report #11568

Problemi con la stampa

2014-11-05 06:04 AM - Thomas Galvan

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:		
Affected QGIS version:	2.4.0	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: invalid
Crashes QGIS or corrupts data:	No	Copied to github as #: 19830
Description		
Salve ho iniziato ad usare qgis per un progetto europeo che lo chiedeva e visto che è molto agevole nell'uso lo sto adoperando anche come alternativa a arcgis. Solo che adesso ho esigenza di stampare una tavola ma mentre a video la vedo perfetta, in fase di stampa mi si sfasa tutto. Sia che faccio la stampa pdf con stampante sia che esporto in pdf il file con l'apposita funzione. Sapete dirmi dove sbaglio? In allegato metto printscreen della tavola come dovrebbe essere e come viene in stampa. Grazie

- Resolution set to invalid
- Status changed from Open to Closed

Hi,

tickets here must be filed in English.

Regarding your issue:

the layers added from the OpenLayers plugin are known to have limitations when printed through the composer. Your best chance is try to print using a scale that is one of the predefined scales by providers like google, osm, bing, etc. You should also try using the Google Mercator CRS for your project.

If this does not work you have alternatives: use a source that is in a standard format (like WMS, there is one that publishes maps from Bing) or use the "save as image" functionality that will create a georeferenced image that you can re-add in QGIS and print without hitting the above limitations.
