

QGIS Application - Bug report #11640

Custom fields do not load from style

2014-11-13 02:27 PM - C S

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:	Project Loading/Saving	
Affected QGIS version:	2.6.0	Regression?: No
Operating System:	Windows	Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: end of life
Crashes QGIS or corrupts data:	No	Copied to github as #: 19893
Description		
<p>A QGIS style (QML) I have been working with suddenly started malfunctioning. Previously, the style would load both the custom appearance (color, pattern, etc.) and the custom fields I had created (drop-downs, mostly).</p> <p>Now, it only loads the appearance.</p> <p>If I create a new field and load the style, the new field is not overwritten by the style fields as it previously was.</p> <p>I tried this again with a newly created style QML and a newly created SLD to see if it was just an issue with my custom style, but the same issue occurs with newly created styles.</p> <p>Also did not work in 2.2.</p>		

History

#1 - 2014-11-13 02:45 PM - C S

- File test20141113.qml added

I attached the test style I was working with. It looks like the custom fields save to style but will not load.
