

QGIS Application - Bug report #1165

WFS must follow WMS convention for URL (missing ? or & at end auto supplied)

2008-07-17 03:51 PM - LuizDomingues53 -

Status:	Closed	
Priority:	Low	
Assignee:	nobody -	
Category:	Vectors	
Affected QGIS version:		Regression?: No
Operating System:	Windows	Easy fix?: No
Pull Request or Patch supplied:		Resolution: fixed
Crashes QGIS or corrupts data:		Copied to github as #: 11225
Description		
This WFS URL (for [[MapServer]] GMap PHP Demo) doesn't work http://localhost/cgi-bin/mapserv.exe?MAP=/ms4w/apps/gmap/htdocs/gmap75_wfs.map because ending "&" is missing. We expect this to work like WMS URLs: ending ? or & are optional and auto supplied by QGIS as needed.		

History

#1 - 2008-08-04 08:48 PM - LuizDomingues53 -

WFS should check URL like WMS (code follows)

```
// from: root/trunk/qgis/src/providers/wms/qgswmsprovider.cpp
/*****
qgswmsprovider.cpp - QGIS Data provider for OGC Web Map Service layers
*/
//***** Lines up to 135 missing **** Follows lines 136 to 154 ****
//
// URL can be in 3 forms:
// 1) http://xxx.xxx.xx/yyy/yyy
// 2) http://xxx.xxx.xx/yyy/yyy?
// 3) http://xxx.xxx.xx/yyy/yyy?zzz=www
//
// Prepare the URI so that we can later simply append param=value
//
if ( !(baseUrl.contains("?") ) )
{
    baseUrl.append("?");
}
else if ( (baseUrl.right(1) != "?" ) && (baseUrl.right(1) != "&" ) )
{
    baseUrl.append("&");
}
```
