Description

For creating UTM maps I would like to only use the 5th and 4th last digit of the coordinates as label of the grid.

(eg.: From 645000 -> 45 as label or 5501000 -> 01 as label) Is it possible to integrate such a function? I mean where you can select the displayed digits?

Here you can see an example of labeling: underdark.files.wordpress.com/2013/03/printcomposer_grids.png

It should be a feature request to add a Tool/Selection to do that ;)

from your description it seems you are not sure this functionality is missing, are you sure?
