Description

Supporting the OGC WMS - Application Profile for EO Products would be beneficial for providers (and thereafter users) which offer large collections of datasets (e.g. >10.000).
The WMS EO Application Profile (-> EO-WMS) allows to offer a collections of datasets as a layers (i.e. a dataset series shares the same product specification) and access individual datasets using their acquisition time.
This would drastically reduce the WMS access-time for a GetCapabilities request and tremendously reduce the size of the returned response file.
