| <b>Description</b>                                                         |        |                                     |
| Overlay function abnormally expressed in accordance with the drawing order |        |                                     |
| An example is not the normal expression according to the drawing order.    |        |                                     |
| Add fiel K-1 is expressing in QGIS 2.2.0                                   |        |                                     |
| Add file K-2 is expressing the same content in arcgis.                     |        |                                     |

#### History

##### #1 - 2014-11-22 10:44 PM - KimGeonHu scorpi07

- File K-2.jpg added

Attach the K-2.jpg again.

##### #2 - 2014-11-23 02:34 AM - Giovanni Manghi

- Status changed from Open to Feedback

I remember a similar issue but now I can't find the ticket.

That issue was (still is) anyway about symbol layers that goes unpredictably under/over other symbol layer.

I'm not sure this is the case.

You should:

- try the most recent qgis release, 2.6
- if the issue still persist please attach a sample project (with data and the exact style/symbology you are using and that causes the issue).

##### #3 - 2014-11-23 02:35 AM - Giovanni Manghi

- Subject changed from Overlay function Error to symbology/layers wrong order

I'm guessing you are using some kind of data defined symbology, right?

#4 - 2014-11-24 12:21 AM - KimGeonHu scorpion7

Your title`s right

#5 - 2014-11-24 12:31 AM - Giovanni Manghi

| Your title`s right

can you please attach a sample project (with data+symbology)?

Does qgis 2.6 makes any difference?

#6 - 2015-12-19 10:31 AM - Giovanni Manghi

- Resolution set to worksforme
- Status changed from Feedback to Closed

closing for lack of feedback.
